## An Eye-Tracking Study of Adult Temperament Differences in College Students

#### KEY INFORMATION ABOUT THE RESEARCH STUDY

Voluntary Consent: By signing this consent to joining you are not under any pressure to do so. You are under no professional or clinical obligation to participate in this study and you are free to withdraw at any time without any penalty or loss of benefits to which you are otherwise entitled. You may choose not to take part in the study, and you may choose to stop taking part at any time. There will be no penalty in any way if you decide not to be in the study or to stop taking part at any time. If you choose to stop taking part in the study, the information you have already provided will be used in the analysis unless you state otherwise.

Alternative is Participatory Participatory is voluntary, and the only alternative is to not participate.

**Handy Abstract:** The purpose of this research is to examine how long-term commitment impacts other facets of our personality, including liking and emotion regulation. We are attempting to determine if one factor (i.e., commitment) actually can increase liking and emotion regulation, or if there is only a correlation. Additionally, this research aims to determine whether relationships between these factors can be sustained across a variety of situations.
